

8. The method in claim 7, wherein any fraction, alteration, modification, or derivation of ratite oil is utilized in the product in any concentration.
9. The method in claim 7, wherein any agent is delivered transdermally using ratite oil, in any concentration.
10. The method in claim 7, wherein the composition may be any type of formulation, including but not limited to gel, cream, lotion, emulsion, oil, ointment, suspension, aerosol, spray, powder, aerosol powder, or semi solid formulation, etc.
11. The method in claim 7, wherein the composition can be packaged for sale in a container or dispenser, including but not limited to, pump dispenser, jar, spray bottle, pouch, tube, roll-on, squeeze bottles, flexible articles intended to be worn on the skin, impregnating said composition into a fibrous or non-fibrous matrix, dermal patch, adhesive tape, etc.

ABSTRACT OF THE DISCLOSURE

My invention is the use of ratite oil as a topical adjuvant and as a transdermal delivery vehicle to carry agents, especially medicines, into the bodies of mammals, including humans. This patent application specifically excludes progesterone as one of the claimed agents (patent 6,303,132), and the topical use of plain emu oil (patent application 20010033838).
